Pediatric Psychopharmacology For Primary Care
Confidently prescribe, monitor, and manage medications for childhood mental health disorders. This game-changing resource from the American Academy of Pediatrics (AAP) arms you with a unique strategic approach - plus practice-tested, condition-specific treatment recommendations. Free bonus digital tool! Get instant answers on specific conditions and medications from your desktop or mobile device! Evidence-based conceptual framework A clear, straightforward methodology - based on current research and clinical experience - defines discrete levels of psychotropic agents and spells out level-specific roles and responsibilities. Group 1: Medications FDA-approved for youth for ADHD, anxiety, and depression - disorders for which pediatric primary care providers commonly initiate treatment and assume prescribing and monitoring responsibilities. Administration and management information for each drug agent includes: Rationale for use, Evidence supporting efficacy and safety, Initial dosing and subsequent adjustments, Measuring therapeutic success, When to consult or refer. Group 2: Medications FDA-approved for youth, typically prescribed by specialists but often monitored in the primary care setting: Antipsychotics, mood stabilizers, antidepressants, anxiolytics, and sleep aids. To support primary care clinician’s collaborative role, usage rationales, efficacy data, and adverse effect profiles are specified for all of these agents. Group 3: Medications not FDA-approved for youth that primary care clinicians will likely encounter. To support primary care clinician’s collaborative role, efficacy data and adverse effect profiles are specified for these agents. Proven, practice-focused guidance Hands-on help spanning the therapeutic process: Assessing for common disorders, Assessing for psychiatric comorbidities, Identifying medication needs, Informed consent, Monitoring patient progress, Managing side effects, Managing multiple medications, Stopping or changing medications.
