This is the story of the miracle medicine deprenyl (eldepryl), an inhibitor of the enzyme Monoamine Oxidase B. The book recounts how it was developed, the people that developed it and popularised it, the amazing benefits it provides to sufferers of Alzheimer's and Parkinson's disease, its preventive action against these, and its by now unquestioned role in extending lifespan. In the Foreword, Saul Kent of the Life Extension Foundation takes a look at studies that confirm and extend the evidence of deprenyl's remarkable life extension benefits. He discusses its role in Alzheimer's disease, its mechanism of action, safety, boosting of anti-oxidant enzyme activity and how it extends lifespan. The main body of the book tells the tale of Selegiline, Deprenyl or Eldepryl. It starts in the USA where instances are provided of how this medicine miraculously improved the lives of sufferers from Parkinson's disease. Deprenyl is part of a group called the MAO Inhibitors. The first of these was Iproniazid, originally developed to treat tuberculosis, when it was discovered that it lifted the mood of sufferers from this disease. As a result, the MAO Inhibitors were used to treat depression, but they had severe side effects because of an interaction with certain foods like cheese. In Budapest, Professor Joseph Knoll and Elizabeth Miller designed the molecule in 1961. Knoll kept it alive for 15 years until it went on sale in Hungary in 1978 as a treatment for Parkinson's. In 1971 Knoll argued that deprenyl does not have the side effects of the other MAOI's because it is a selective inhibitor of MAO. The article that finally opened the door to the worldwide

use of deprenyl appeared in The Lancet in 1971.
